

Ball Drips

Our brass ball drip is a ball type check valve. When installed correctly, the internal ball sits on the bottom portion of the valve body, allowing for proper drainage of moisture accumulation. Ball drips are most commonly used on the dry side of a fire department connection. This use helps keep moisture from collecting inside the fire department connection body.

Specifications:

- Solid Brass
- Horizontal installation only

Part Number	Size	Finish
BD1/2	1/2" M NPT x 1/2" M NPT	Brass
BD3/4	3/4" M NPT x 3/4" M NPT	Brass
