

Swaging & Crimping Tools

Our manual swaging & crimping tools are well-made and economical. They are specifically designed for swaging oval sleeves onto cable.

Our battery operated swaging & crimping tool offers the newest technology and eliminates the need to swage Loos zinc-plated oval sleeves by hand. This is especially helpful when a large number of brace connections are required for the job. A very strong and fast-operating tool, it comes with two long-lasting, fast charge lithium ion batteries, so you can be sure to have strong portable power at all times.

Using the correct tool and following proper swaging instructions will ensure proper cable connections that actually exceed the breaking strength of the cable.
